POWER AND ENERGY

It is hard to tear yourself away from this look. It penetrates deeply into human souls and it is hard to resist the impression that **Jesus'** eyes are watching you closely as if you were the only one on this earth. As if you were the whole world to him. It seems to contain the great mystery of **God's** faith in the wisdom of every human being. Jesus is full of love for everyone who looks at him.

Trudno oderwać się od tego spojrzenia. Wnika głęboko w ludzkie dusze i trudno oprzeć się wrażeniu, że Oczy Jezusa patrzą na ciebie uważnie, jakbyś był jedynym na tej ziemi. Jak gdybyś był dla niego całym światem. Wydaje się, że zawiera wielką tajemnicę wiary Boga w mądrość każdego człowieka. Jezus jest pełne miłości do każdego, kto na niego patrzy.

My Jesus,
I'm alive.

You are alive. **You** are **My Lord** and **my God**.

I give myself to **You - Right Now!**

I will do anything **You** want - because **YOU** want it!

Fill me with Your *Holy Spirit* - and Help me to help others -
Today! AMEN

Mój Jezus
Żyję.

Żyjesz. **Jesteś** moim **Panem** i moim **Bogiem**.

Oddaje się **Tobie** - właśnie teraz!

Zrobię wszystko, co zechcesz **TY** - bo **TY** tego chcesz!

Napełnij mnie swoim **Duchem Świętym** - i pomóż mi pomagać
innym - już dziś! AMEN

“A human’s greatness lies not in his possessions, but in who he is; Not in what he owns, **but in how he shares with others”** ____ St. Pope John Paul II

Człowiek jest wielki nie przez to, co posiada, lecz przez to kim jest, nie przez to, co ma, lecz **przez to, czym dzieli się z innymi”** ____ Św. Jan Paweł II

Premier Ontario Mr. Doug Ford,

Dear Premier,

Congratulations to us, residents of Ontario, that we have such a great Christian prime minister, who considers the health of their inhabitants to be the most important.

It is with great concern that I follow the latest news every day on information on increased mortality among older people living in long-term care homes. Lack of sanitary and epidemiological control, staff without health tests are a few of the many negative practices of the management of these homes. The problem with high mortality in these homes lies, primarily lies in the heating system.

Prime Minister, I would like to remind you that the heating system using natural gas of our homes was to be withdrawn from the market a few years ago by the Government of Kathleen Wynne. However, this did not happen, and all residents of Ontario and other provinces use this deadly system. Lower coronavirus mortality among residents of the Province of Vancouver is associated with the fact that winter is shorter there and its inhabitants are less poisoned by unburned gas molecules absorbed by the respiratory system like lungs. We also know that Coronavirus is nothing but upper airway inflammation. The highest mortality among the elderly people living in old people's homes are those houses where there is gas-blown heating. My research shows that the mortality rate among residents of the "Tullamore Care Community" located at 133 Kennedy Street in Brampton is zero "0". There, the heating is water.

Turning on the heat in Canada is inevitable every autumn. However, doing so can make some people sick and cause health problems. Why? And what can be done to lessen the impact?

It comes like clockwork every year—that day when we homeowners turn on the heat the first time in season. For some, it's as simple as flipping a switch on the thermostat. For others, it's the start of an exhausting, lengthy battle with sickness. How this work?

The owner of the house "X" has a heating stove, which was installed on February 2016. For two months of heating season (February to April) he did not notice any breathing problem except for drying the throat and nose.

The owner of the house "Y" has a similar heating system but has been in use for 12 years. When, at the beginning of the heating season on October 15, the thermostat starts to breathe, the same symptoms of illness from previous years return. Experts from heating inform him that it is a dust allergy, so the rest of his funds is devoted to cleaning the entire system. One week later, after this heating system cosmetics, the symptoms of the disease appear again.

Forced-air heating gas into duct and mixed with dust and allergens element this is what human received in 24 hours per day per 6 months. In home by three years I was testing my own breathing system. Through the leakage of the combustion system in the gas furnace, unburnt gas goes to our lungs. This is the reason for the formation of many diseases of the respiratory system. Increases the risk of developing pneumonia and consequently increases the mortality rate of lung cancer.

Increased mortality from coronavirus in the elderly is associated with upper respiratory tract diseases associated with the gas-extinguishing heating system previously known in their residential homes and now in long-term care home w Toronto and GTA. For many years, we have been providing information on the harmfulness of gas and blower heating used in our homes to people. CEEC Power and Energy company, in addition to indicating negative activities of gas heating furnaces and new technologies based on WiFi waves my potential cause of cancer, CEEC shows ways to prevent these diseases. **We strongly recommend changing this heating system to gas-water.**

WE NEED TO USE THE VOICES OF SCIENTISTS TO PUBLICLY OBTAIN TRUTH what new technology brings, e.g. WiFi, dirty electricity for the human body and the environment.

WE NEED A NATIONAL STRATEGY FOR TESTING NEW WIFI SYSTEM TECHNOLOGY FOR THE PROTECTION OF PEOPLE'S LIFE AND HEALTH.

Technical development achievements have been subordinated only to the interest of the great technological magnate, it is irrelevant to them whether these achievements in the field of wireless telecommunications without which the modern world can not exist harm the health of their users and negatively affect the natural environment for them the most important thing is money. They spread the wrong information, claiming that they actually do not see the negative impact of wireless technology on the human body, despite the fact that international health clinics indicate an increase in cancer incidence and also the shortening of human life, especially at the beginning of the twenty-first century. There is a range of evidence that adverse health effects can result from increased radiation exposure to interconnected wireless devices and infrastructures which emit nonionizing microwave or radio frequency radiation (MW/RFR). Such effects can include impairment of reproduction, amplification of effects of other toxic

agents, and contribution to chronic disease. Additionally, at exposure levels of MW/RFR commonly tolerated by the general population, some patients experience acute and chronic symptoms including fatigue, tinnitus, headaches, as well as neurological and cardiac dysfunction.

PS.

I, Janusz Bolesław Nowakowski, son of the Warsaw Uprising 1944, a member of the Home Army prisoner of the German Dachau concentration camp, remind you and warn you that in this death camp in which my father was imprisoned, various types of research on prisoners were carried out using various types of deadly gas. there were artificial viruses that have now been dissolved all over the world. My Father, thanks to his prayer to God, survived this deadly camp

Janusz B. Nowakowski, is an electrical research engineer with over 47 years of professional experience. Prior to working in Canada, he worked for over 15 years as a researcher of the impact of power lines on people and the living organisms. He was Assistant Professor at the Institute of Power Engineering at Research Institute, Warsaw, Poland. He worked for Siemens Canada for over 18 years in developing new components for high voltage generators, that reduce the amount of thermal energy. Currently, he is the President of CEEC Electrical Services and Electricity Research Institute Inc. For over 30 years, he has been a member of the Professional Body of Electrical Engineers, including The Institute of Electrical and Electronics Engineers (IEEE) and the Institute of Engineering and Technology Worldwide and the European Institute of Power. He is also a member of the EMF Scientist Organization.

GOD BLESS YOU and GOD BLESS Canada

Janusz Bolesław Nowakowski, B. Sc.EE., MBA
President CEEC
