Memory and Truth

A Human's greatness lies not in his possessions, but in who he is; not in what he owns, but in how he shares with others.

The look of our Lord Jesus Christ is very captivating. It pierces and penetrates our hearts. It speaks directly and individually to each human being. It portrays and reflects God's every lasting love and wisdom for all mankind.

Technological developments and achievements have been under the control and influence of the great magnate. It is irrelevant to them whether these achievements in the field of wireless telecommunications without which the modern world can not exist harm the health of their users and negatively affect the natural environment, however, for them the most important thing is money. They spread the wrong information, claiming that they actually do not see the negative impact of wireless technology on the human body, despite the fact that international health clinics indicate an increase in cancer incidence and also the shortening of human life, especially at the beginning of the twenty-first century. There is a range of evidence that adverse health effects can result from increased radiation exposure to interconnected wireless devices and infrastructures which emit nonionizing microwave or radio frequency radiation (MW/RFR). Such effects can include impairment of reproduction, amplification of effects of other toxic agents, and contribution to chronic disease. Additionally, at the exposure levels of MW/RFR commonly tolerated by the general population, some patients experience acute and chronic symptoms including fatigue, tinnitus, headaches, as well as neurological and cardiac dysfunction.

I, Janusz Boleslaw Nowakowski, want to present my family's biography in order to give the readers a picture of these drastic times of World War II, and let the readers judge for themselves whether it is worth arguing about frivolous journalistic and press release records, after all, none of this will bring 6 million Jews and Poles back to life who were victims of this tragic world war. Whether you were a Pole or Jew in Poland you were destined for total extermination by Hitler. Allow the Polish and Jewish historians to resolve the disputes related to World War II. For decades Poles and Jews lived and worked side by side in peace. The Second World War, which was tragic for both nations, caused interpersonal relations between Jews and Poles to deteriorate. During the German occupation there were many Polish people who risked their lives saving the Jews. There were many more Polish people risking their lives and helping the Jews than those who were not. For example, my grandparents hid many Jewish families in their own house, risking of losing their lives if found by Germans. For many years after the war, my grandparents have been receiving letters of everlasting gratitude and appreciation from surviving Jewish families.

I, Janusz Boleslaw Nowakowski, son of a member of the Home Army, Warsaw Uprising, prisoner of the Dachau concentration camp, I will always stand up for the truth written by Polish patriotic journalists in the Polish diaspora. I will always defend the historical truth about Poles written by others about Poland and demand the corrections be made regarding false information printed or spoken since World War II.

"Faith and reason are like two wings on which the human spirit rises to contemplate the truth." Pope John Paul II.

Many times, in the world press there were words about Polish Concentration camps, which were rectified after the interventions of our organization and private Poles. Former US President Barack Obama made the same mistake in speaking about the Polish "Auschwitz" Camp. It was a German camp built by Hitler's Germany in occupied Poland.

We Poles and Jews should talk about what unites us and not about what separates us. According to "Theory of Special Creation" all the different forms of life that occur today on planet earth, have been created by God, the almighty. Adam and Eve were, according to the Book of Genesis, Bible and Quran the first man and woman created by God. Life on earth began from them according to Christians, Muslims and Jews. The 3 religions have a common agreement stating the fact that God created the universe in seven days, reserving the sixth day for creating man and woman in His image and likeness. On the seventh day God rested on the Sabbath Day." Thou shalt keep the Sabbath Day holy"

These three religions should build good interpersonal relationships through love for neighbor, respect and help each other because we have one God.: "Thou shalt love thy neighbor as thyself."

"Man is great not because of that, but because of who he is, not through what he has, but through what he shares with others. Greatness lies not in his possessions, but in who he is. Not in what he owns, but in how he shares with others " Saint John Paul II

Contemporary problems of this world, such as climate change, shifting of poles, or the weakening of the Earth's magnetic field should be the subject of joint defense activities of all the followers of GOD, which will protect our planet Earth from its destruction. Scientists from these three religions should play the leading role of scientific research. We should conduct scientific research that will strengthen the earth's magnetic field, protecting the earth

from destructive cosmic rays, human life, allowing us to live safely on this common planet, which is earth, while not undermining the existence of God.

The Earth's magnetic field is weakening faster than expected

Scientists who have reassured us not so long ago that it is unlikely that the sudden weakening of the Earth's magnetic field and the change of poles will happen overnight, are now changing their minds. However, we can say little about it without further analysis.

Until now, it was thought that this is a fast process, but only from an astronomical point of view, and as we know from astronomers it means as much as several generations. Therefore, the very process of changing the poles would take about 3-5 thousand years but entering it can take as little as 500 years.

Meanwhile, a recent study by scientists from the University of California revealed that during the last reversal, 786,000 years ago, the pole change occurred in less than 100 years, which was a very fast, even surprisingly dynamic process.

During the re-passage, the magnetic field would be in a state of complete chaos, and the compasses would be completely useless, since we would have many north and south poles.

The Earth's magnetic field works on the principle of geodynamic, and its driving force is convective currents in the planet's liquid core.

Scientists can roughly estimate how this process will work, but we do not know exactly what causes it. Nobody has reached the earth's core yet, and probably will not last long, if never.

It is also not known how the magnetic field affects the slope of the Earth's rotation axis and whether the change of poles, for example, will not change the direction of our planet's rotation around its axis or its "tipping over". The effects would be deplorable. A similar phenomenon could have occurred on Venus, which is spinning in the opposite direction to the Earth.

The process of changing the magnetic field was very rapid in the neighboring planets. For example, on Mars, it could have completed the creation of primitive life, which happened 4 billion years ago.

Putin accused the West of geo manipulation of the Earth's environment through chemtrails and the desire to control the population.

"People and animals are regularly poisoned as part of the so-called geoengineering project. Worldwide, and especially recently in Europe, activities are underway to spread harmful spraying under the guise of combating global warming. "

John Holdren.

Russian President Vladimir Putin accused Western governments of geo-manipulation of the Earth's environment through chemical spraying operations aimed at changing the global climate and poisoning a large part of the world's population. In turn, the Russian prime minister made a statement informing that spraying chemicals on the Earth's atmosphere through streaks of chemtrails is financed by corporations and sanctioned by governments. The President of Russia, while collecting money in his hometown of St. Petersburg, asked by current journalists about whether atmospheric spraying operations (streaks of chemtrails) and weather manipulation programs implemented by Western governments constitute: the largest attack on the life and health of the Earth in the history of mankind.

"I AM STILL DEEPLY CONCERNED BY THE RISK, WHICH IS RESULTING FROM INTERFERENCE IN THE CLIMATE OF OUR PLANET. THIS IS A

MONUMENTAL THREAT THAT HAS BEEN AND IS CARRIED OUT AGAINST NATURE AND LEADS TO CONTROL THE POPULATION AND PROFIT. "

- VLADIMIR PUTIN.

Putin also added that it does not matter if the streaks of chemtrails and the broadly understood geoengineering program is the biggest threat, or the second biggest threat, or the third. What matters is that it is an attack on modern civilization and the planet itself. He also believes that it is remarkable that the US government continues to refuse to recognize measures that prohibit the further spraying of atmospheric chemistry. Finally, he notes how people can demand rules and controls of this operation if the government itself does not admit it?

Numerous studies and related evidence clearly show that geoengineering and all climatic manipulations lead to the destruction of the ozone layer. Scientists dealing with this topic are afraid that our planet will at some point reach a crisis point, the Rubicon will be crossed and there will be no turning back, our planet will not be able to regain strength. Poisoned Earth, like a terminal body, will be left to die.

This is not all, however, information about psychoactive substances and antigens that are a form of an aerosol vaccine have recently come to light, which are also the composition of chemtrails' streaks. There is an official explanation explaining why NASA sprays lithium (lithium), a component of pharmaceutical drugs most commonly used to treat people with manic depression or bipolar disorder, into our ionosphere.

Of course, it would be easier to accept the official NASA explanation if this organization was not so mysterious about everything it does in space. However, one thing is certain, NASA personnel have admitted that lithium, along with other chemicals, is intentionally placed in our environment regularly. It is possible that many NASA employees are not even aware of the true motivations of geoengineering projects like chemtrails.

Nonetheless, scientists believe that atmospheric sprays are chemicals that are intended to vaccinate humans with aerosol pharmaceuticals. Pub Med entitled 'The feasibility of aerosol vaccinations in humans.' 'It was discussed how increasing the volume of antigen in the atmosphere can be beneficial in spray vaccines.

In addition, aerosol vaccines can be used in: 'developing countries and disaster-stricken areas.' 'The abstract also acknowledges that several thousand people have already been vaccinated with live attenuated measles and influenza A vaccine.

The summary further states that aerosol vaccination is ideal for: "large populations." In other words, millions of people have no idea that they have been covered by the controversial vaccination project distributed in the form of an aerosol by condensation streaks, or chemtrails.

In this case, Penilla Hagberg spoke no harsh words about streaks of chemtrails a few years ago, mentioning that lethal chemical streaks pose a direct threat not only to humans, but even affect animals. The effect of chemtrails resulted in such diseases as Alzheimer or Parkinson and neurological diseases in children, the rash of which we can observe in recent years.

The World Health Organization has been studying aerosol vaccines for years, as do philanthropic agencies that have clear goals for sterilizing the population. It is also worth noting that the US pharmaceutical industry has not been released from any legal liability for mass medications because pharmaceutical companies were granted legal protection by the

1986 Act. A few years ago, the bill was questioned, but it was finally upheld by the US Supreme Court in 2011.

Dear readers, because more and more States and nations are refusing genetically modified GMO food and refusing to drink fluorinated water, which, by the way, has been classified as a neurotoxin by one of the world medical magazines "Waking Science Magazine," the power structure, certain global elites, still want to accompany and create population development, it also reaches for chemtrails that make changes in human neurochemistry.

Finally, let's return to the issue of lithium and ask ourselves why lithium? Well, lithium affects the way of thinking, changing the levels of serotonin and norepinephrine secreted by our endocrine system. Lithium strongly affects the entire brain system, but NASA insists that "it's not dangerous." They report that it does not harm the humans. Well, even doctors said that it is dangerous because it is difficult to determine the correct dosage. Certainly, spraying large amounts of lithium into the air with aerosols should be questioned.

Ozone hole in the Earth's atmosphere (in the stratosphere) at a height of 10 to 50 km there is a layer with increased concentration of ozone (O₃) - ozonosphere. The maximum ozone concentration is maintained at an altitude of approx. 23 km. A significant decrease in ozone concentration (up to 90%) in the ozonosphere is called the ozone hole. It has been observed since the late 1970s, mainly around the South Pole, over Antarctica. Appears there every year in the spring (from September to November). The rate of decline is around 3% per year. The ozone hole over Antarctica has already grown by 15% since its discovery. It spreads further over southern Argentina and Chile. Ozone reduction reaches up to 70%. At altitudes of 14-17 km there are almost complete ozone deficiencies.

And now I present thoughts and quotes from Saint John Paul II

- You don't live, you don't love you don't die - to the test
- It doesn't belong to you yesterday. Uncertain tomorrow ... Only today is yours.
- Faith and reason are like two wings on which the human spirit rises to contemplate the truth
- Do not be overcome by evil, but overcome evil with good
- Human life is priceless because it is a gift of God whose love has no limits. And when God gives life, he gives it forever.
- A man cannot be brought up. He must educate himself, be an educator for himself

QUIZ YOURSELF

The year 2015 was officially recognized by the United Nations as Year of Light. Quiz yourself as you become illuminated with these light-related trivia questions.

1. A light year is not the duration of time, but a unit of length used informally to express astronomical distance. One light year equals how many miles?
 - a. 90 million
 - b. 35.7 million
 - c. 24 billion
 - d. 6 trillion

2. The speed of light is 299,792,458 meter per second. How long was it take for light to travel from the Sun to Earth?
 - a. 8 minutes, 17 seconds
 - b. 15 minutes, 9 seconds
 - c. 23 minutes, 45 seconds
 - d. 31 minutes, 26 seconds
3. The electric light bulb was invented by pair of Canadians (Woodward & Evens) in 1874. How much were they paid when they sold the patent to Thomas Edison?
 - a. \$5,000 US
 - b. \$15,000 US
 - c. \$25,000 US
 - d. \$50,000 US

- **Electricity in 2050**

Electricity production has a very large impact on the development of other sectors of the economy and the standard of living. At the current level of economic development, most residents, especially in highly developed countries, can not imagine life without access to electricity, which allows the use of other technological achievements.

The highly economically developed and the largest developing countries in terms of population are prevailing in the production of electricity.

The leader in terms of production volume is the United States producing 1/4 of the world's electricity. It is also significant that ten countries - the largest producers - produce nearly 2/3 of the world's electricity.

A twenty or so years ago, practically speaking, there was no question of protecting the natural environment, although everyone felt that the air and water were no longer the same. It was also difficult to define what is the natural environment, whether it was from before the industrial revolution or from the Bronze Age? In the last quarter-century of the twentieth century, the notion of sustainable development appeared, also not definitively defined.

- **The influence of electric and magnetic fields on people**

Electric and magnetic fields have always accompanied man. Atmospheric discharges, or the Earth, which can be compared to a negatively charged sphere, being at the same time a great magnet with poles not coincident with the geographic poles, are the natural sources of these fields. We can conclude that the field from a natural source does not have a significant impact on the functioning of our body.

However, along with the progress of civilization, and thus the progress of technology, new - artificial sources of magnetic and electrical fields were created. These are primarily RTV devices. The impact of these fields is difficult to determine because we do not have adequate receptors. The exception is electromagnetic radiation with a wavelength 0.4 - 0.75 μm , which corresponds to visible radiation, and thermal radiation.

Based on observations, tests, or causal relationships, we can conclude that there is an impact of artificial fields on our body. In the following, I will present the characteristics and effects of the electric and magnetic field on humans.

These facts and events were recorded a few months before the coronavirus pandemic began.

To silence the accusations of Russian President Vladimir Putin of US control of populations, President Donald Trump sent on May 22, 2020 a gift to Russia as a means of protection against pandemic coronavirus.

About the Author: Janusz Boleslaw Nowakowski was a researcher of energy devices serving in the field of production, distribution and supply of electricity. For over 47 years he studied the risks to humanity and nature resulting from ubiquitous and increasing exposure to electromagnetic fields and EMF radiation generated by electric current in wireless devices from electrical power sources and the global wireless communication infrastructure. Currently he is a president of the CEEC Energy Research Institute. For over 30 years he is a member of professional bodies for electrical engineers include the Institute of Electrical and Electronics Engineers (IEEE) and Institution of Engineering and Technology Worldwide and European Institute of Power.
